EDUCATION

Central Institute of Technology

B.TECH Computer Science Engineering (C.G.P.A - 8.02)

Kokrajhar, Assam

Sep. 2022 – May 2026

Kendriya Vidyalaya Tamulpur

HS in Science Stream (Percentage - 91.8)

Tamulpur, Assam

Apr. 2019 – Mar 2021

EXPERIENCE

Freelance Web Developer

LeadSterra

Jun 2024 – Present

Kokrajhar, Assam

- Developed responsive web applications using Next.js, React, and SCSS
- Deployed applications on custom domains using GoDaddy hosting and CI/CD workflows
- Implemented SEO best practices, improving search visibility and page ranking
- Collaborated with clients to design scalable and user-friendly interfaces

Full Stack Developer

Perfomer Technologies

Jun 2025 – Mar 2026

Remote

- Designed and implemented scalable backend services in Go for processing Amazon seller data
- Developed interactive dashboards using Recharts for data visualization
- Integrated REST APIs to deliver structured data for frontend consumption
- Improved data processing efficiency and reporting workflows

Web Dev Lead

Google Developers Group

Oct 2023 – May 2025

CITK, Assam

- Led web development initiatives and organized technical workshops/events
- Delivered sessions on modern web technologies
- Built internal tools and dashboards to track event analytics

PROJECTS

Form Builder Studio | *Python, FastAPI, React, MongoDB, Docker* | [GitHub](#)

August 2025 – Present

- Built a full-stack form builder platform using FastAPI and React/Next.js, enabling dynamic form creation and management
- Implemented JWT-based authentication with user-specific form storage and access control
- Designed a schema-driven architecture to support flexible form structures and validation logic
- Implemented WebSocket-based real-time synchronization for instant form updates across clients
- Containerized services with Docker and automated deployments using CI/CD pipelines via GitHub Actions

Leaf Disease Detection | *FastAPI, React/Next.js, MongoDB, LangChain* | [GitHub](#) | [Live](#) September 2025 – Present

- Built an AI-powered web application for plant disease detection using FastAPI and React/Next.js
- Implemented zero-shot classification using pre-trained vision-language models for flexible disease identification
- Integrated LLM reasoning using LangChain and OpenRouter APIs to get contextual and structured responses
- Designed structured JSON pipelines for consistent UI rendering and improved frontend integration
- Deployed using CI/CD workflows, enabling rapid updates and reliable production availability

Decentralized Polling System | *Solidity, Ethereum, Hardhat, React, Ethers.js* | [GitHub](#)

May 2025 – Jun 2025

- Built a decentralized voting application using Ethereum smart contracts to ensure transparent elections
- Developed and tested Solidity smart contracts with Hardhat for secure poll creation and vote management
- Integrated MetaMask and Ethers.js to enable wallet authentication and on-chain transaction signing
- Designed a responsive React frontend for creating polls, casting votes, and viewing live election results
- Implemented role-based access control to restrict poll creation while allowing public vote verification

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, TypeScript, HTML/CSS, Go

Frameworks: React, Node.js, Django, Flask, FastAPI, TailwindCSS

Developer Tools: Git, GitHub, Docker, VS Code, Visual Studio, Windows, WSL/Linux

Databases: Postgres, MongoDB, Sqlite, Redis

Libraries: Pandas, NumPy, Matplotlib, Axios, Shadcn, Redux, Recharts

Other: REST API Development, SEO Optimization, Data Visualization, WebSockets
